- enjoy lunch and listen to an engaging motivational speaker
- receive test prep materials (valued at \$25)
- return home with an attainable study action plan
- meet friends and attend a bright future expo
- find the DRIVE you need to do well on the ACT

### MATH

Offers important strategies for each of the six content areas in the Math portion of the ACT: pre-algebra, elementary algebra, intermediate algebra, coordinate geometry, plane geometry, and trigonometry.

### ENGLISH

Offers a brief review of the six elements of effective writing found in the English section of the ACT.

### SCIENCE

This breakout will provide tips on how to best analyze scientific information and research in chemistry, physics, and the Earth/space sciences.

**\*\*In Math, English & Science:** Students will practice sample questions with the instructor using interactive polling technology, allowing them check their own accuracy and improvement as they incorporate trusted test-taking strategies.

### READING

After reading a passage of text, this breakout will walk through the practice of notating the passage to organize information and explore ten different ways to identify the correct answers to questions provided. Once they've learned to identify the types of questions asked in the Reading portion of the ACT and practiced answering those question with the instructor, they will then have the chance to apply those tips on their own and measure their improvement.
